

DIGITIZATION Health Anywhere

Enabling Technology for Hospitals, Healthcare Providers and Patients

- ManageMyHealth™ digitizes the patient's full medical record by working with the medical record department (MRD).
- The digitized record is uploaded to the ManageMyHealth™ application, creating easy access to patient records for sharing such information with other healthcare providers where required.
- Uploading the patients' records to the ManageMyHealth™ application reduces the hospital's storage, archival, and retrieval costs.
- This will enable the hospital to comply with the NABH accreditation process (Information Management System).

Digitization is a process of converting patient's paper-based health records into digitized forms. Digitizing health records involves medical document imaging, medical record management, medical record scanning, and medical record storage.

ManageMyHealth™ introduces digitization service that creates an electronic relationship between the doctor and the patient.

This service is fully accredited and ISO 9001 certified with data security under ISMS 2013.

Digitization of patient medical records is now an essential requirement for obtaining the Indian NABH accreditation and for other quality assurance purposes.

Key Advantages

-  Provides fast and easy access to patient records
-  Minimizes record storage space
-  Fully compliant with patient privacy and confidentiality requirements
-  High level of efficiency
-  Prevents loss of records
-  Enhances data portability
-  Integration with Provider and Patient portals of ManageMyHealth™
